From wells to mats

The industry of products for the construction of artesian wells is a highly specialized area in which experience, combined with the continuous research for new and ever more advanced technologies, is a key critical factor. This is clearly evident to Pancera Tubi e Filtri, the firm from San Benedetto Po (MN) that manufactures pipes, screens and accessories for this industry since 1976.

Originally established as a small business in the steel pipes market, Pancera progressively expanded its horizon by opening a plant dedicated to PVC threaded pipes production. Thanks to the positive feedback from the market, the company chose to increase its production range with several items to satisfy a wider range of needs. That's how many new accessories were added over time such as pipes and screens for wells (steel and PVC), polyethylene pipes and screens and drilling fluids.

Over thirty years of experience in supplying pipes, screens and accessories for artesian wells construction, and the recent lines of drilling fluids and mats

Today the company carries out in house all the production cycle: microcracking, threading of PVC pipes and sleeves for steel pipes, manufacturing of screens wrapped with steel or geotextile mesh and PVC accessories like caps and closing well caps. This major product range addresses to several markets, both in It-

aly and abroad, managed through local distributors. Let's see the latest innovations introduced by Pancera Tubi e Filtri in its diversified product range.

Easy Pump System

The result of an ideal combination of experience and technical application, Easy Pump System is an assembly system that makes handy, efficient and fast the connection between PVC riser pipes and submersible pumps. The system utilizes a PVC pipe supplied with a previously installed PVC sleeve at one edge and an inox threaded joint for the submersible pump at the other edge.

The most important innovation is the Systemblock, a locking system that prevents the sleeves from loosening or unscrewing due to vibrations, torsions, and pump frequent switching on and off. Easy Pump System is made of high quality rigid PVC which have physical
